Photoshop's workflows are based on layers, which allow for nondestructive changes to a photograph. These changes make it possible to make sharp transitions between layers, with the original layer not being affected. As you make changes to a layer, that layer remains intact underneath, while the changes you make to the top layer are isolated to it and are reflected in each new layer that you create. This is an important advantage over other image editing software, which generally overwrites information on the layer below it. The top layer is generally set to be the active layer, allowing Photoshop to display the image as it was originally set up. Photoshop can be set to hide the active layer so that users cannot see any work they may have done to the image. Photoshop controls are generally grouped in two modes: namely, tools and panels. Various tools have been loaded with shortcuts to easy access. You can customise these tools and panels to your preference. The main window is divided into a display area and an edit area. The display area is for displaying the currently selected layer and the toolbars which can be customized to suit your needs. The edit area is for creating the image. You can configure the toolbars in Photoshop to display your image files. The configuration of the toolbars is a bit different from applications other than Photoshop. These include the Image, Zoom, History, and Align tools. The history panel lists the last 50 snapshots, and it allows the user to revert to an earlier snapshot with a single click. Photoshop also allows users to print images, apply various effects and filters, and apply adjustments to the image. Photoshop also allows users to import and export image files from other applications and even other Adobe Photoshop products. Photoshop has a feature called Smart Objects that allow the user to manipulate the same layer in different ways and in several areas of the image simultaneously. This feature makes it possible to apply different filters and transformations to different parts of the image. The mobile workflow is a new feature in Photoshop CC and enables you to take a digital photo on a mobile device, such as a phone, and then print the same photo in Photoshop from anywhere. The mobile workflow relies on the Phone Print feature, which enables you to print or send photos from your phone through the cloud. The best part is that it doesn't require you to print a physical photo, as the software turns the photo you take on your smartphone into a high-

More Than Cosmetics – Why Self-Care Is The Essence Of Feminine Beauty It's a moment that every woman dreads; the moment when her face is naked and staring at her in the mirror. It's an aspect of Feminine Beauty that remains a source of embarrassment because women have failed to embrace it. During her time as an assistant make-up artist, Patricia* would squeeze her hand into a basin of ice water (or would suffer the horror of being subjected to a "mud bath" to numb her face), pamper her skin with creams, potions and masks before a big night out. She was the ultimate example of Feminine Beauty. The secret to her over-the-top beauty regime? Self-care. Under the watchful eye of her mother, she'd spend her evenings sipping on cocktails and spending her time skin deep, nurturing her look and beauty regime. It was the essence of Feminine Beauty and if anything, she was the poster girl for Self-Care. As the mother of a teenage girl, Patricia was clear about what makes a lady. "There is no greater honour than to be a woman," she says. "It is your right." Some weeks would go by with her vacillating between being angry and being carefree. A sense of pride, self-worth and confidence blossomed in her during these moments, a glowing sense of Feminine Beauty, which she practised every day and still does today. From her early days in India, Patricia recalls: "The women in my community are very feminine. When I was growing up in Bangalore, my mother would dress me up in lovely dresses that she would sew. She would also treat me like a princess. It was only when I moved to Australia and joined the corporate world that I began to feel ashamed of my appearance." After struggling for almost a decade, she realised the only way to move forward was to let go of how others thought she looked. She created her own brand of Feminine Beauty and just fell in love with this new-found beauty. "I realised that there is no reason why a woman should not wear makeup and still be feminine." She quickly rose to prominence in the field of make-up and found herself helping women in the workplace understand what it means to be feminine in today's world.
